

Revolutionary Pre-Painted Steel

LUXTM

LUX PRE-PAINTED STEEL

Lux is a revolutionary and unique new product that will change the way you approach building materials. Experience the strength, versatility and durability of pre-painted steel while enjoying the visual appearance of other materials such as wood, zinc, corten, chameleon and fabric.

Lux consists of a steel base, with a zinc aluminium coating (45% zinc and 55% aluminium alloy) to a normal mass of 200g/m².

Lux utilises PVDF paint technology ensuring that it will withstand even the toughest of marine and industrial environments. The pre-painted and printed finishes are applied through a three bake process, further enhancing durability and corrosion resistance.

Lux has a full range of warranties available on all its products. Warranty periods are determined by the final application and location of the building; the environmental categories are described in AS/NZS 2728:2013.

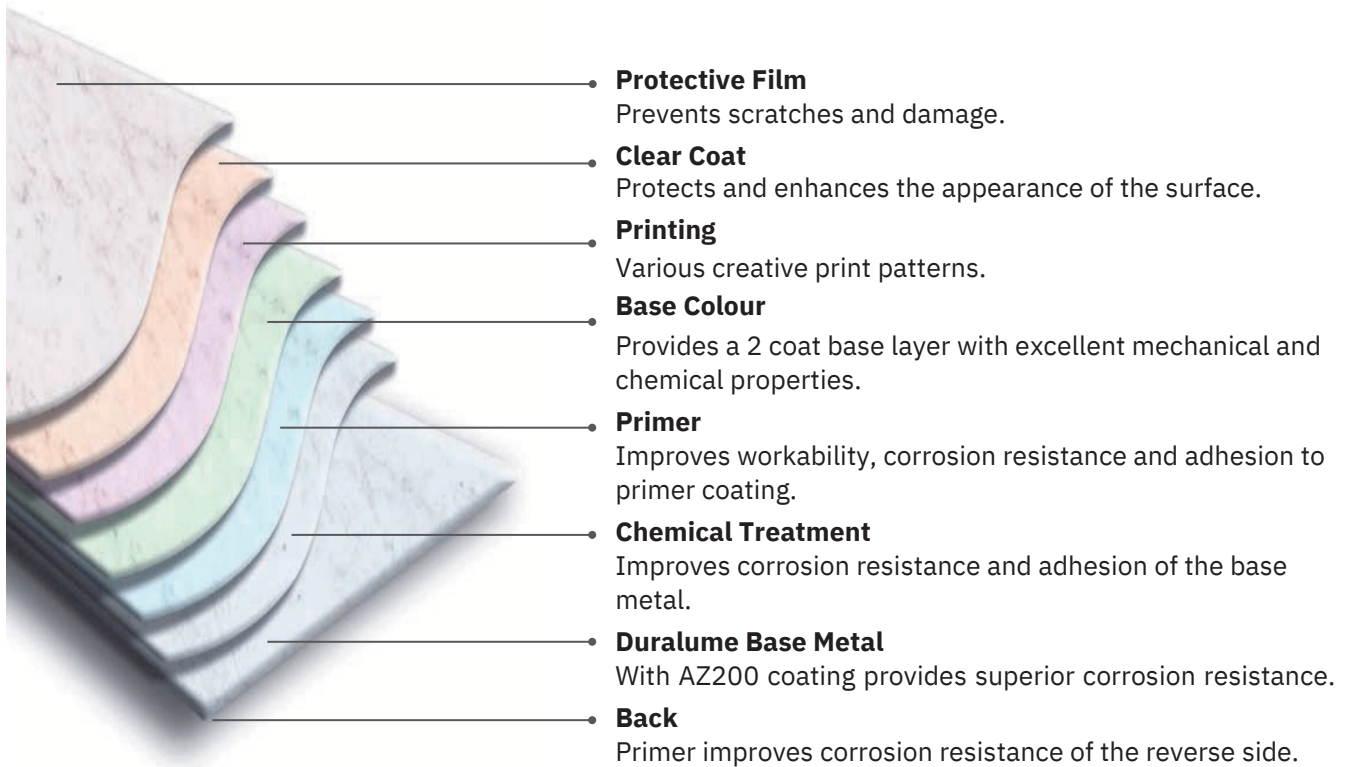

*All Lux is available in 0.55mm base metal thickness and is suitable for a wide range of architectural roofing, internal and external wall claddings, rainwater goods and general building usage.

WARRANTY

	Inland (>1500m from coastline)	Coastal (500m to 1500m from coastline)
